PARMENION

AI-POWERED SMART SECURITY & BUSINESS MONITORING PLATFORM

DIRECTORS - NIKHIL JANGIR ,ANSHU BHATT

INTRODUCTION

Transforming traditional CCTV into intelligent real-time AI surveillance for retail stores, jewelry shops, and ATM infrastructure.

“Active AI Security, Not Just Passive CCTV.”

COMPANY OVERVIEW

PARMENION is building the next generation of AI-driven security systems that actively understand, monitor, and respond to real-world shop activities instead of simply recording footage.

PARMENION combines Artificial Intelligence, Computer Vision, IoT sensors, and Generative AI agents to create intelligent security ecosystems capable of proactive monitoring, abnormal activity detection, and autonomous business assistance.

PROBLEM STATEMENT

Today’s CCTV cameras are passive surveillance tools . Although they have motion detection and recording features but they still depends on the human monitoring and manual responses. these systems can detect movement but they cannot understand the context,intention or severity of an event.

For example, existing CCTV systems cannot reliably differentiate between:

- a customer and a potential intruder,
- normal employee movement and suspicious behavior,
- accidental activity and deliberate theft attempts,
- harmless motion and real emergency situations.

OUR SOLUTION

01 PARMENION aims to solve this limitation by introducing an AI-powered Generative Security Agent that acts like a virtual intelligent guard.

02 Instead of only detecting motion, the system analyzes activities contextually, understands patterns like human reasoning, and autonomously responds to abnormal situations in real time.

03 The platform combines AI vision, behavioral analysis, smart sensors, and generative AI decision-making to analysis of human behaviour and autonomous alert system

VISION

To build the future of autonomous AI-powered security systems that intelligently protect businesses, understand real-world activities, and create safer, smarter, and more efficient commercial environments across the world.
we will also make this system capable for the daily house hold activity to kept the home protected even if you are far away

Redefining security through autonomous AI intelligence.

MISSION

PARMENION’s mission is to transform traditional surveillance into intelligent real-time security ecosystems by combining Artificial Intelligence, Computer Vision, IoT sensors, and Generative AI agents. We aim to provide businesses with proactive monitoring, instant threat detection, autonomous alerts, and smart operational assistance that improves both security and business efficiency.

OUR SERVICES

- AI-powered smart surveillance systems
- Real-time intrusion and night activity detection
- Smart cash drawer and counter monitoring
- Generative AI security assistant
- Fire and emergency detection alerts
- Mobile-based live monitoring and notifications
- Business analytics and operational insights
. Shop monitoring through mobile application
- Employee and activity monitoring
- AI-based suspicious behavior detection
- Customized security solutions for retail and jewelry shops
- ATM and high-security infrastructure monitoring
- Cloud-based centralized security management
- Intelligent alert and response system
- AI-driven business assistance and automation

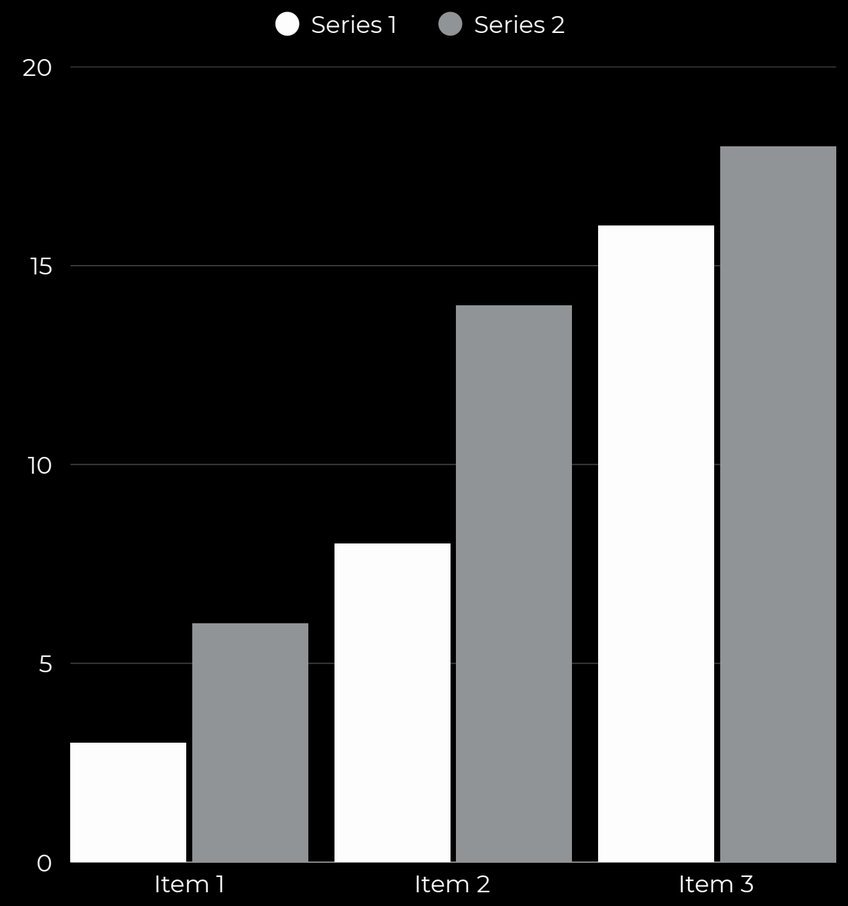

MARKET ANALYSIS

- Rapid growth in AI-powered surveillance and smart security markets
- Increasing demand for intelligent real-time monitoring systems in houses,hotels,retail and jewelery shops
- Rising concerns regarding theft, employee misuse, and night-time intrusion in commercial establishments
- Traditional CCTV systems remain passive and heavily dependent on manual monitoring

Distribution & Market Penetration Strategy

- Collaboration with existing CCTV dealers and surveillance installation providers
- Integration of PARMENION software into already installed camera infrastructures
- Partner-based deployment model to reduce hardware and operational costs
- Subscription-based software services for continuous recurring revenue
